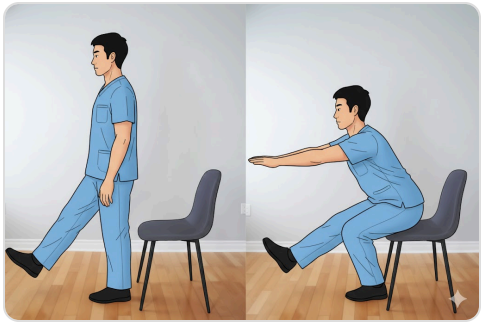
HOME EXERCISE PROGRAM

Personalized Recovery Plan

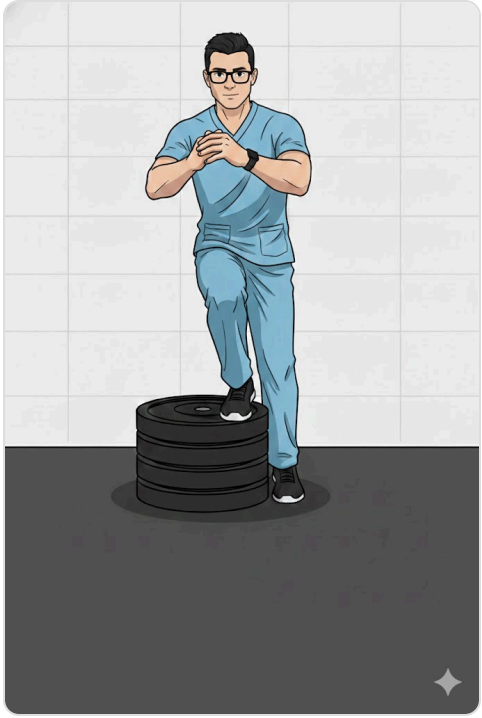
STANDING ANKLE INVERSION

Tie the exercise band around your injured foot and pull the band with your arm on the same side to create tension. Maintain the tension with your arm as you perform a heel raise with your injured leg. Return your heel to the starting position and relax your arm. Repeat for 10 reps x 3 sets. For eversion pull with the band with the other arm.



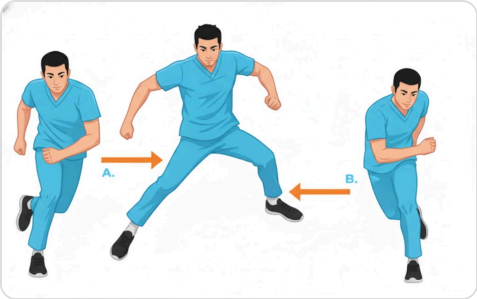
SINGLE LEG SQUAT ON CHAIR

Start by standing on one leg and lifting the other leg forward. Ensure there is a sturdy chair behind you. Slowly sit down on the chair and stick your glutes back while keeping your knee straight. Once you have taken a seat, slowly rise up again. Repeat this 10 reps x 3 sets. Switch legs after each set.



SIDE STANDING SINGLE LEG SQUAT

Start by having both legs on a pile of weights or a sturdy bench. Then move your body closer to the edge and lower one leg down to the ground before standing back up and having both legs on the bench again. Perform this task slowly while minimizing the amount of hip and knee movement. Switch legs. Repeat 10 reps x 3 sets.



LATERAL BOUNDING

Start by bending your right knee around 45 degrees and tuck your left leg slightly behind your right. Propel yourself towards the right and land on your left leg. Then begin bounding on your left by bending your left knee.

These exercises are intended to be the most basic and equipment-free exercises to help current movement dysfunction, please try to perform daily and consult a physician if the exercise worsens your pain and function significantly.
