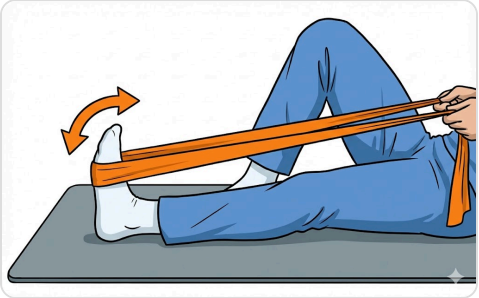
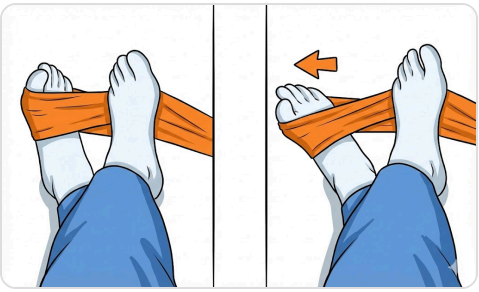
HOME EXERCISE PROGRAM

Personalized Recovery Plan



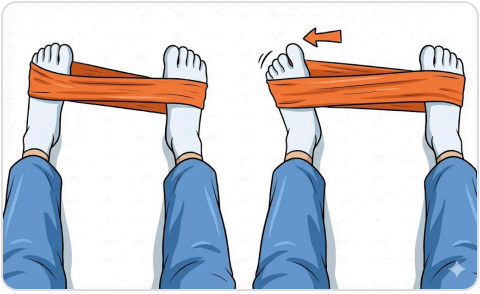
SEATED ANKLE PLANTARFLEXION

Lie in a long sitting position. Wrap the exercise band around the bottom of your injured leg and pull with both hands to maintain tension. Push your ankle downwards until some tension is felt, slowly return to the starting position. Repeat for 10 reps x 3 sets.



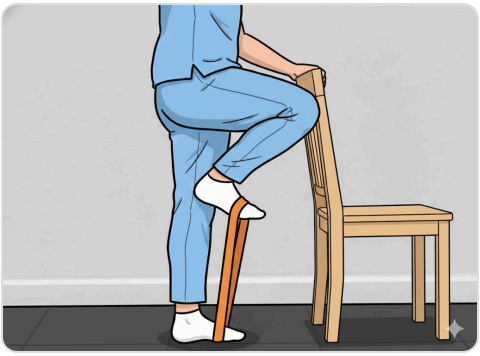
SEATED ANKLE INVERSION

Tie the exercise band around the inside of your injured ankle. Then cross your legs, having your uninjured leg on top of your injured leg and stepping on the band to create tension. Create tension by turning your injured ankle inward slowly.



SEATED ANKLE EVERSION

Tie the exercise band around both feet. Open both legs apart. Your uninjured leg will act as a post, thus do not move it. Move your injured ankle outward slowly and then return it to the starting position. Repeat this for 10 reps x 3 sets.



STANDING ANKLE DORSIFLEXION

Have a sturdy chair or countertop to hold on to. Tie an exercise band around both feet. Start by standing with both feet on the ground. While holding on to the chair start lifting one foot up at a time. Resist the pull of the band by pointing your ankle and toes up. Once tension is felt, slowly return your foot on the ground. Repeat this 10 reps x 3 sets and switch legs.

These exercises are intended to be the most basic and equipment-free exercises to help current movement dysfunction, please try to perform daily and consult a physician if the exercise worsens your pain and function significantly.
