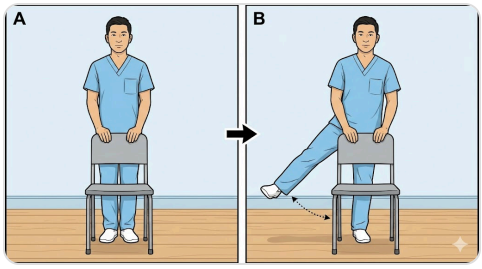
HOME EXERCISE PROGRAM

Personalized Recovery Plan

SINGLE LEG STANCE

Have a sturdy chair or countertop to hold on to. Start by standing with both feet on the ground. Lift your uninjured foot up while holding onto the chair. Hold this position for 10-15s. If this is too easy progress to holding with one hand, to one finger and to no hands for 10-15s. Repeat this for 10 reps x 3 sets.



STANDING HIP ABDUCTION

Stand on the side of a sturdy chair. Lift the outside leg away from the inner leg until some tension is felt. Do not bend your waist and ensure your shoulders are squared. Repeat this for 10 reps x 3 sets before changing sides.

SIT TO STAND FROM CHAIR

Ensure there is a sturdy chair behind you against a wall. Cross both arms, bring your nose over your toes and stand up without using your hands. Then from the standing position, slowly sit down on the chair and stick your glutes out. Once you have taken a seat, slowly rise up again. If this is too easy hold onto a weight. If it is too hard use a higher chair (add a pillow on the seat). Repeat this 10 reps x 3 sets.

General Protocol:
- Frequency: 1-2x Daily
- Sets/Reps: 3 sets of 10
- Keep pain below 3/10.
