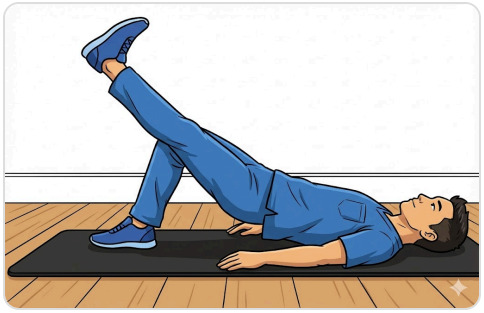
HOME EXERCISE PROGRAM

Personalized Recovery Plan

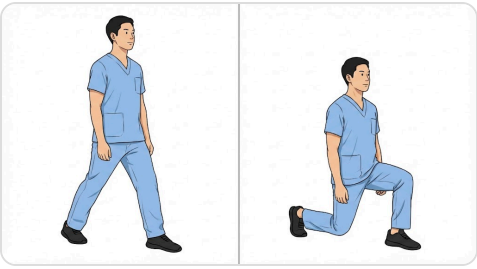


STRAIGHT LEG RAISE

Start by lying down on your bed or mat Your injured knee should be straight. Gently squeeze your quadriceps muscle- imagine pulling your knee cap towards your chest and then lift your knee as high as your can before any pain. Hold this contraction for 3s. Repeat 10 reps x 3 sets.

WALL SLIDES

Start with your back against the wall and then slide both your feet slightly in front of you while keeping your buttock and back against the wall. Bend your knees to 45 degrees (no pain) while keeping your buttocks and back against the wall. If there is no pain and it is too easy go down no further than 90 degrees. Repeat this 10 reps x 3 sets.



LUNGES

Stand in a staggered stance with one foot in front of the other. Bend your lead leg

These exercises are intended to be the most basic and equipment-free exercises to help current movement dysfunction, please try to perform daily and consult a physician if the exercise worsens your pain and function significantly.
