# HOME EXERCISE PROGRAM

Personalized Recovery Plan

## SIT TO STAND FROM CHAIR

Ensure there is a sturdy chair behind you against a wall. Cross both arms, bring your nose over your toes and stand up without using your hands. Then from the standing position, slowly sit down on the chair and stick your glutes out. Once you have taken a seat, slowly rise up again. If this is too easy hold onto a weight. If it is too hard use a higher chair (add a pillow on the seat). Repeat this 10 reps x 3 sets.

## LOW BRIDGE

Lie on your back. Gently squeeze your buttocks and lift your hips up a little to create a low bridge that engages your core muscles. Do not lift high and arch your back, ensure there is no pain with this exercise. Repeat this for 10 reps x 3 sets.

## CLAMSHELL EXERCISE

Lie sideways on your uninjured side. Stack your ankles and knees ontop of each other. Bend your knees slightly. Keep your ankles closed together but lift your outer knee upward until it is slightly above waist level, then slowly return it back to the starting position. Do not use your waist to help lift your knee up. Repeat this for 10 reps x 3 sets. If this exercise is too easy add an exercise band around your knees.

Low Back Protocol:
- Frequency: 1-2x Daily
- Sets/Reps: 3 sets of 10
- Keep pain below 3/10.
